

**M.Sc. (Five Year Integrated) in Computer Science**  
**(Artificial Intelligence & Data Science)**

**Semester 1**

**Python Programming Lab**

**LAB CYCLE 1**

**Instructions:**

1. Do and write programs with proper naming conventions.
2. Practice all programs on your own. Copying the solution from others will be penalized.
3. Maintain Index/ content properly.
4. Brief descriptions including algorithm used and flowchart of the work you did for each exercise.
5. If you believe I have an error in a lab, please inform me of it. Explain why you think it is an error and, if you like, suggest a correction.
6. Perform unit testing with prepared test cases.
7. Save the programs in a separate folder on PC (in Lab), and push it in your Git repo.

SL No	Question	Concepts Covered
1.	<p>Develop a program to read a four-digit number and find its</p> <ol style="list-style-type: none"><li>a. Sum of digits</li><li>b. Reverse</li><li>c. Difference between the product of digits at the odd position and the product of digits at the even position.</li></ol> <p>Example: <b>Input</b> 234 <b>Output</b> 10 (1+2+3+4) 4321 -5(1*3 - 2*4)</p>	<p>input () Strings Arithmetic operators</p>
2.	<p>Develop a program to read the three sides of two triangles and calculate the area of both. Define a function to read the three sides and call it. Also, define a function to calculate the area. Print the total area enclosed by both triangles and each triangle's contribution (%) towards it.</p> $A = \sqrt{s(s-a)(s-b)(s-c)} \quad \text{with} \quad s = \frac{a+b+c}{2}$	<p>Datatype Functions Expressions Built-in functions</p>

3.	<p>Develop a program to read the employee's name, code, and basic pay and calculate the gross salary, deduction, and net salary according to the following conditions. Define a function to find each of the components. Finally, generate a payslip.</p> <table><tr><th>Basic Pay (BP)</th><th>DA (%)</th><th>HRA (%)</th><th>MA</th><th>PT</th><th>PF (%)</th><th>IT (%)</th></tr><tr><td>&lt;10000</td><td>5</td><td>2.5</td><td>500</td><td>20</td><td>8</td><td>–</td></tr><tr><td>&lt;30000</td><td>7.5</td><td>5</td><td>2500</td><td>60</td><td>8</td><td>–</td></tr><tr><td>&lt;50000</td><td>11</td><td>7.5</td><td>5000</td><td>60</td><td>11</td><td>11</td></tr><tr><td>else</td><td>25</td><td>11</td><td>7000</td><td>80</td><td>12</td><td>20</td></tr></table> <p>Gross Salary (GS) : BP + DA + HRA + MA Deduction (D): PT + PF + IT Net Salary = GS – D</p>	Basic Pay (BP)	DA (%)	HRA (%)	MA	PT	PF (%)	IT (%)	<10000	5	2.5	500	20	8	–	<30000	7.5	5	2500	60	8	–	<50000	11	7.5	5000	60	11	11	else	25	11	7000	80	12	20	Conditional Branching
Basic Pay (BP)	DA (%)	HRA (%)	MA	PT	PF (%)	IT (%)																															
<10000	5	2.5	500	20	8	–																															
<30000	7.5	5	2500	60	8	–																															
<50000	11	7.5	5000	60	11	11																															
else	25	11	7000	80	12	20																															
4.	<p>Develop a program to perform the following task:</p> <ul style="list-style-type: none"><li>a. Define a function to check whether a number is happy or not.</li><li>b. Define a function to print all happy numbers within a range.</li><li>c. Define a function to print first N happy numbers.</li></ul> <p>A <b>happy number</b> is a number defined by the following process:</p> <ul style="list-style-type: none"><li>Starting with any positive integer, replace the number with the sum of the squares of its digits.</li><li>Repeat the process until the number equals 1 (where it will stay), or it <b>loops endlessly in a cycle</b> which does not include 1.</li><li>Those numbers for which this process <b>ends in 1</b> are happy.</li></ul> <p>Note: if a number is not being happy after 100 iterations, consider it sad.</p>	Loops – for, while  Nested loops																																			
5.	<p>Develop a program to read a string and perform the following operations:</p> <ul style="list-style-type: none"><li>Print all possible substrings.</li><li>Print all possible substrings of length K.</li><li>Print all possible substrings of length K with N distinct characters.</li><li>Print substring(s) of length maximum length with N distinct characters.</li><li>Print all palindrome substrings.</li></ul> <p>Define function for each of the task.</p>	Strings, String functions, Slicing
